Product Description

Cleaning filters may be more cost effective than replacing.

When filters – whether for air, water, oil, cooking range grease, dust or other contaminants – become dirty and an ultrasonic filter cleaner could be a very practical alternative to the cost of replacing them, especially for businesses that require frequent filter replacement. Some types of filters do not lend themselves to refurbishing in filter cleaning equipment. Typically these are made out of fiber that traps particles so effectively that ultrasonic cleaning is impractical. In such cases the best choice may be discarding and replacing.

Save cost, time and more effective.
